

IDEATION PHASE

Brainstorm & Idea Prioritization

Date	30 September 2026
Team ID	SWTID-2026-3024
Project Name	AI-Augmented Backend Development AI BlogNest API
Maximum Marks	4 Marks

Step-1: Team Gathering, Collaboration and Select the Problem Statement

The team members gathered together and discussed different problems related to digital content creation and blog management. The team identified that creating, organizing, updating, and summarizing blog content manually can be time-consuming. Content creators also require secure user management and proper organization of blog posts.

After discussion and collaboration, the following problem statement was selected:

Problem Statement:

To develop an AI-powered blog content management system that helps users create, manage, organize, and summarize blog content while providing secure authentication and role-based access.

Step-2: Brainstorm, Idea Listing and Grouping

The team conducted a brainstorming session to generate different ideas and features for solving the identified problem. The ideas were grouped into the following categories.

AI Features

- AI-powered blog content generation
- AI-assisted content summarization
- AI content assistance

Blog Management

- Create blog posts
- View blog posts
- Update blog posts
- Delete blog posts
- Manage comments
- Manage categories

User Management

- User registration
- User login
- User authentication
- Role-based access control

Database Management

- Store user information
- Store blog information
- Store comments
- MongoDB database management

Security

- JWT authentication
- Password hashing using bcrypt.js
- Input validation
- Input sanitization
- Error handling

Testing

- REST API testing
- Postman testing
- API response verification

Step-3: Idea Prioritization

After brainstorming and grouping the ideas, the team prioritized the features according to their importance and feasibility for the project.

Priority	Idea	Reason
1	AI Blog Generation	Helps users generate blog content efficiently
2	User Authentication	Provides secure access to the application
3	Blog Management	Enables users to create and manage blog posts
4	Role-Based Access	Provides different permissions for different users
5	MongoDB Database	Stores and manages application data
6	AI Content Summarization	Helps users create concise summaries of blog content
7	Comment Management	Allows management of comments associated with blogs
8	Security and Validation	Helps protect the application and validate user input
9	API Testing	Helps verify the functionality of backend APIs

Final Selected Idea

Based on the brainstorming, idea grouping, and prioritization process, the team selected **AI BlogNest – AI-Powered Blog Content Management System** as the final project idea.

The project combines Artificial Intelligence with modern backend technologies to provide blog content generation, content management, user authentication, role-based access, database management, security, and API-based operations.
